Adobe has added an entire suite of AI features to their program, enabling users to have the application make image corrections, like skin effects and selective retouching based on face detection. AI enhancements are housed within a new "Deep Learning" panel. The new tool features a "learning mode" and a "guided tools tool" and is better able to handle objects, remove blemishes and even repair dropped shadows and any other edits that were missed by the Brush system. There are new brushes that offer a few Photoshop's most popular selections, like the Eye and Highlight-Shadow/Face tools. In addition to various selection tools, the AI-enhanced Brush system has a wide selection of brush presets, including the Airbrush, Flat, Painting, and Patterns brush set. The new Paint Bucket Brush allows the user to quickly paint extensive areas of a document. The new Healing Brush Tool helps users clean up blemishes and repairs lost details in an image. The Spot Healing Brush Tool offers a circular brush, allowing the user to remove multiple blemishes rapidly and use different colors with the brush when needed. The Healing Brush Tool allows the user to repaint highlights, colors and temperatures. The Clone Stamp Tool can be used to 'clone' pixels from one location on a document and "stamp" them on another area, creating a new image from the original. Users can edit swatches using the new swatches, gradients and patterns options. The user can apply adjustments (like brightness, contrast, colors, etc.) to a swatch palette using similar tools to those found in the Adjustments Layers panel.

This can be slightly overwhelming because there are a few different Creative Cloud plans to pick from according to what your area of interest is. To make things simple

there are 3 different options that you will have to choose from that include Photoshop. First the 'Photography' plan which is \$9.99/mo and grants you access to Adobe Photoshop and also Adobe Lightroom which is a program that allows for detailed photo editing. This is a great value considering the second option is \$20.99/mo for use of only Photoshop. The third and final option which I think is the best option is the Student and Teacher plan that is \$19.99/mo and includes access to every Adobe program available. This is an amazing value because you get access to everything Adobe has to offer. Adobe products are always looking for ways to make your work easier. That's why Adobe's Pages team is working to bring Photoshop to the web. Pages allows you to build dynamic websites right from scratch, or you can import a variety of different file types like keynote presentations, Word documents and PowerPoint presentations. Save your work in fine-grained web formats like HTML, CSS or Adobe Muse, and use Adobe's InDesign to create professional documents for use on the web or convert documents to other web formats. Pages works smoothly alongside native browsers like Safari and Firefox and is available through Adobe Creative Cloud. So now you can use Photoshop in the browser and import photographic

images, captions, and logos. If you need even more than Photoshop on the web, you might want to think about the new Adobe Creative Suite 5 Animation Standard, which allows you to animate your work as a project in an Adobe Animate workspace and has many of the same powerful features as Photoshop CS 6. You can create your animations in Adobe Flash Professional and export them as .fla or .swf files. You can then bring those projects back to Photoshop and edit them. Other useful tools include the Adobe suite of photo editing tools, Adobe Lightroom, a photo management application, which is free while your subscription is active. Lightroom has many powerful tools to organize and edit your images. Photoshop Express, recently introduced as a free download, allows you to view, edit, and share your images online. Adobe Portfolio is a web-based gallery creation application, and you can use Photoshop and other Adobe tools to create and edit an image gallery.
