File Links:Q: Recursive call on a method whose arguments have references to methods I'm trying to write an application which has a table of items. An item has a bunch of parameters, where a parameter can be specified to be shown in the table. I have a list of items and want to display them with their parameter names, so I pass a collection of item strings to the ItemView's constructor. The item view's constructor takes a DisplayRows method, which iterates through each item and displays its parameters. When an item is passed in as a parameter, it's passed as a reference so that the parameter can be modified: class ItemView { private List parameterNames; public ItemView(List paramNames) { this.parameterNames = paramNames; } private void displayItems(List items) { foreach (Item item in items) { // Display item name and parameter names this.DisplayRows(item.Name); } } public void DisplayRows(string itemName) { this.WriteLine("\*\*\* " + itemName); foreach (string paramName in this.parameterNames) { this.WriteLine(" " + paramName); } } } And then it gets called with this: class Program { static void Main(string[] args) { List items = new List() { new Item() {Name="One", color=Color.Green}, new Item() {Name="Two", color=Color
